After being officially launched on March 26, 2018 in Mumbai, India, the Oppo F7 is now expected to be released soon in Dili on May 2018. The successor smartphone of the Oppo F5 will come with more advanced and sophisticated features than the previous model. As the well-known Oppo slogan, "Selfie Expert & Leader", they will certainly not forget to bring a smarter camera with higher resolution at launch this time.

Here are 5 advantages of the new Oppo F7:

1. 25MP front camera

Since it is a selfie smartphone, Oppo's main advantage lies in its front camera. Unlike the previous Oppo F5, which 'only' has a resolution of 20MP on the front camera, now the Oppo F7 has been given a more powerful front camera consisting of the 25MP Sony 576 which has the ability of High Dynamic Range (HDR). In addition, the front camera Oppo F7 is also equipped with an Artificial Intelligence (AI) feature which can recognize multiple people in a single picture. You can also take advantage of the various Augmented Reality (AR) Stickers for funny selfie and wifie photos.

2. Super Full Screen

In addition to the camera, the Oppo F7 also has a beautiful screen design and elegance. The Oppo F7 screen will certainly be larger than the Oppo F5 which has a size of 6.0 inch. This time the screen on the Oppo F7 is estimated to reach 6.23 inches. It is a HD + IPS LCD screen with 1080 x 2280 pixels resolution and a 19: 9 ratio. The resolution and size make the Oppo F7 screen touted as a "Super Full Screen". The resolution will also make the display image clear, sharp, and satisfying to enjoy with all multimedia content. The screen is coated with Corning Gorilla Glass 5 which is very resistant to scratches.

3. Features AI Beauty on both cameras

If the Oppo F5 only uses AI Beauty Recognition Technology on its front camera, this time Oppo F7 takes advantage of this feature for both cameras. Front and back. Artificial intelligence (A.I Beauty Recognition) is able to recognize 296 different points on the face so that the

smartphone can store a database of photos based on the grouping of faces. It is also able to polish the selfie results so they appear more clear and beautiful, but still realistic. Not to forget, with this feature of DSLR-style bokeh effects can still be created even though Oppo only uses a single camera.

4. MediaTek's latest processor with 8 Octa-core CPU cores

While the sophistication is important, it would be useless if you ignore the processor, which is the heart of a smartphone. The Oppo F7 will be equipped with the latest MediaTek processor which is a Helio P60 System-on-Chip (SoC) with 8 core octa-core CPUs consisting of 4 Cortex-A73 2 GHz CPU core and 4 Cortex-A Cortex CPU cores A53 2 GHz, complete with Mali-G72 MP3 GPU.

5. Notch Display

The design of the screen "Notch" that Apple introduced on the iPhone X in 2017 seems to have provided inspiration for other vendors who have followed in their footsteps. This design seems to have a lot of enthusiasts with several smartphone manufacturers also applying the design "notch" on their flagship models.

The "Notch" on Oppo F7 is filled by speakers and its flagship camera with 25 MP resolution complete with sensor and LED Flash.

Although it is only a few months ago since the successful launch of the Oppo F5, it seems the Oppo F7 is expected to have many enthusiasts looking for a higher level of sophistication. Are you also one of the F7 enthusiasts?
